

CIRCULAR LETTER

Red. 119/719/2016

Dear Partners,

RE: Updated UL/ULC Listings & 15 Years Certified Lifetime by UL

We wish to inform you that UL & ULC Underwriters Laboratories of USA & Canada issued their updated Certificates/Listings for FirePro products.

Attached with this circular please find copies of the updated Certificates/Listings. These can also be accessed by visiting the official [UL](#) and [ULC](#) online directories.

In these updated listings, the Stream length of our FP-5700/S/T/TS aerosol generating unites, are revised from 5m to 8.4m, as a result of the successful completion of the maximum height area coverage tests.

This letter is also intended to inform you that we have successfully completed the UL agent aging tests for 15-year life, for our FirePro aerosol generating units. Please, use the following link to access the [official letter from UL](#). The FirePro units produced after the 5th of December 2016 bear a replacement date 15 years after their production date. The letter from UL however confirms that all UL-Listed units **previously manufactured, are also certified for the 15-year product life**, as no changes affecting the product life have been made.

Our UL Design, Installation, Operation and Maintenance Manual is now revised to Version 1.0, Revision 6 (November 2016) to reflect the above amendments, and can be easily reached by using the following [Link](#).
